Quantum Love

**4 Children, Advanced Scientists
And Others of Their Kind**

Quantum Love is a book that helps us to recuperate a Quantum vision in a very simple and childlike way. A Quantum vision is an essential vision of things that unfortunately we have lost, a way of seeing things that we should have been taught since childhood because it is not only both spiritually and scientifically correct, but it would have indeed helped mankind to have a better life experience. Seeing with a Quantum vision helps one to see the oneness of all there is and to respect all life. Seeing with a Quantum vision would have probably ended with war and all other human self-caused

problems, just thinking of that makes the heart happy; but unfortunately we are still stuck in seeing things the 'Newtonian way' even when not only Jesus 2,014 years ago, and Albert Einstein in 1919, have told us that everything that we see as matter is Light vibrating too slow, and modern Quantum physicists are telling us that all there is, is one Web of Light called the Quantum Field. It's about time to listen to what we are being told and learn to see with a Quantum vision!
